

B.A. (PROG.) I YEAR (SEMESTER-I) DISCIPLINE- LINGUISTICS

Dear Students,

Most of us know at least one language whether spoken or signed. However, in order to carry out even a simplest conversation, it requires profound amount of linguistic knowledge. Linguistics is a scientific study of language in all different aspects including structure of language. As language is so central to our lives, Linguistics is uniquely interfaced with a variety of disciplines across natural sciences, social sciences, humanities etc.

The teaching of Linguistics generally involves lectures, demonstrations, practical analyses. Classes are interactive and students are expected to learn as much from doing and practicing things in classroom (at present- online) as much from lectures and demonstrations/analyses.
